

There are two schools of thought:

Professor Seltsam's ...

... and everyone else's!

Scientific laws are not invented, they are discovered and by understanding these laws science becomes our servant and not our master.

The simplicity of the Fibonacci Sequence and the elegance of the Golden Ratio show that truth is beauty and explain why a four-leaf clover is so difficult to find.

If you thought Chaos was only a theory, then come to the practical!

The Professor has full Public Liability Insurance

**'Fun-da-mentals  
of Science'**

Entertaining lectures for enthusiastic and reluctant scientists alike.

# Professor Seltsam's Science Lectures

Aimed primarily at adults and children over ten, these lectures present real science with real experiments in unusual, exciting and unexpected ways.

Schoolchildren, parents, grandparents and even professional scientists have watched in wonder and disbelief as the Professor explains complex theories in terms of cricket balls and knicker elastic.

The Professor's highly animated delivery, his willingness to answer questions and his spontaneous lateral leaps of the imagination ensure that no two lectures are quite the same.

Fundamental scientific concepts such as the conservation of energy, wave theory and the butterfly effect have all suffered his treatment.

"Now whatever you do don't press this button!"

With the help of his audience and the use of several practical demonstrations his lectures are genuinely educational, entertaining, informative and unforgettable.

Lectures last around 40 minutes and may contain any number of the following: explosions, smoke, string, weight-lifting, counting, thinking, laughing and chocolate.
